

BULUT QUINLAN CALIS

Software Development Engineer in Test | Principal QA Automation Engineer

Chicago/United States | quinlansdet@gmail.com | (224) 605-9736 | linkedin.com/in/bulut-quinlan/

SUMMARY

Software Development Engineer in Test (SDET) with 8+ years of experience architecting automated test frameworks and leading end-to-end quality assurance across web, mobile, API, and distributed systems for fintech and SaaS platforms. Proficient in JavaScript and TypeScript test automation (Playwright, Selenium, Appium), RESTful API validation (Postman, RestAssured), and Continuous Integration / Continuous Delivery (CI/CD) pipeline implementation. Proven release quality gate and mentor who translates system behavior into production risk - delivering go/no-go decisions that protect high-stakes applications and accelerate Agile development teams.

SKILLS

Automation & Testing Frameworks:

Playwright · Selenium · Appium · Postman / Newman · RestAssured · Karate · JMeter

Languages:

JavaScript · TypeScript · Python · SQL · Java

Web Frameworks & Architecture:

React · React Native · Node.js · RESTful APIs · Service-Oriented Architecture (SOA) · Event-Driven Architecture

Cloud Platforms & Observability:

Amazon AWS (SQS, SNS, EventBridge, S3, CloudWatch) · Azure · Datadog (Logs & RUM) · Splunk · SauceLabs · Power BI

CI/CD & Source Control:

GitHub / Git · CI/CD Pipelines · Continuous Integration · Continuous Delivery · Jenkins · Agile / Scrum · Jira · Rally

Testing Disciplines:

Functional Testing · Regression Testing · Integration Testing · System Testing · End-to-End Testing · Smoke Testing · Mobile Testing · API Testing · Database Validation · User Acceptance Testing (UAT)

Test Management Tools:

qTest · Jira · ServiceNow

Certifications:

CompTIA Security+ · Fortinet NSE 1 – Network Security Associate

AI-Assisted QA:

- AI-assisted test design using Copilot, OpenAI, Claude, Windsurf, and Atlassian Rovo
- LLM workflows for edge-case discovery, exploratory scenario generation, and automation scaffolding
- AI-supported synthetic test data creation, log analysis, and root-cause investigation across distributed services

EXPERIENCE

EverBright – Solar Financing Platform | September 2023 – Present

Principal Software Development Engineer in Test (SDET)

React · React Native · Django · AWS Event-Driven Architecture · Playwright · Postman · Datadog

- Eliminated financing workflow regressions across a 5-stage application lifecycle (application, underwriting, contract, installation, operations) by architecting 200+ Playwright end-to-end automated test cases, reducing regression-related rollbacks by approximately 40%, exhibiting my focus on delivering reliable software.
- Drove cross-platform test coverage across React web and React Native mobile clients in each release cycle, achieving zero cross-platform defect leakage over 6 consecutive sprints by structured integration testing and regression testing strategies.

- Accelerated contract-level defect detection 3x by replacing UI-only smoke tests with Postman/Newman API test suites that validated downstream service behavior, business rules, and RESTful API contract compliance.
- Ensured 100% async event failure detection pre-production by asserting AWS SQS, SNS, and EventBridge message payloads and confirming system state changes after each event across 8+ distributed services in an event-driven architecture.
- Built and maintained Power BI dashboards tracking release quality, defect trends, integration health, and operational KPIs used by engineering leadership for release readiness decisions.
- Reduced mean time to root cause by 50% by correlating Datadog RUM user sessions with backend event logs during production investigations, resolving 3 critical incident post-mortems per quarter.
- Analyzed Datadog, AWS event, and application telemetry data to identify anomalies, perform root-cause investigations, and support executive reporting.
- Secured zero failed go-lives across 12 regulated third-party integrations (identity verification, TPV confirmation, fraud decisioning, communications) by owning end-to-end integration testing and release readiness validation.
- Mentored junior Software Test Engineers and collaborated with Agile development teams during architecture reviews pre-implementation, surfacing 15+ high-impact risk items through shift-left quality practices.
- Won 2 company hackathon competitions: (1) designed an AI-assisted test automation framework prototype adopted into the release pipeline; (2) co-led cross-functional team to re-architect the React Native mobile app for Apple TV, demonstrating full-stack delivery beyond QA scope.
- Owned cross-team Dev-to-QA-to-Production release coordination across multiple services, providing go/no-go recommendations to engineering and product leadership based on defect trends, monitoring signals, and automated test results.

Fiserv – Payment Processing Platform | June 2021 – April 2023

Lead Software Development Engineer in Test (SDET)

Payment Lifecycle · REST APIs · SQL · Splunk · CI/CD · Iron Bank Hardened Containers

- Protected financial accuracy across high-volume transaction processing by building end-to-end automation covering the full lifecycle (authorization, settlement, reconciliation), validating balance correctness and transaction state changes on every critical payment path.
- Reduced production-impacting failures by 60% by establishing nightly regression testing pipelines targeting the 20 highest-risk payment paths, surfacing critical failures 8 hours before business-day peak traffic.
- Guaranteed RESTful API payment integrity at scale by implementing contract-level API testing across 50+ endpoints, eliminating a class of silent data corruption defects through systematic functional and integration testing.
- Delivered zero security compliance gaps by implementing CI/CD pipelines using Iron Bank hardened container images, satisfying DoD-aligned container security standards for all automated test execution environments.
- Decreased defect triage cycle time by 35% by leading structured defect triage sessions that translated automated test failures into operational risk rankings, enabling product to prioritize hotfixes within same-day SLA.
- Reduced Splunk log investigation time from hours to minutes by building correlation dashboards that linked user behavior patterns to backend anomalies, directly informing root-cause analysis for 4 major incident post-mortems.
- Performed data validation and root-cause analysis across payment systems using SQL, Splunk, and Power BI to investigate transaction discrepancies and reporting inconsistencies.
- Coached and mentored Software Test Engineers on automation best practices, test plan design, and regression strategy; conducted pull request reviews and contributed to continuous improvement of the automation framework.
- Validated backend data correctness using SQL database validation, ensuring financial reconciliation accuracy across settlement and reporting workflows.
- Partnered with product, operations, and engineering stakeholders to define KPIs and deliver operational reporting supporting high-volume financial transaction processing.

KeHE Distributors | October 2020 – June 2021

QA Automation Engineer

Order Processing · API Testing · Database Validation · CI/CD Smoke Tests · Agile

- Eliminated manual deployment validation by building a deployment smoke test suite covering 30+ system readiness checks, reducing post-deploy verification time from 45 minutes to under 5 minutes.
- Improved defect detection rate by 25% by converting ad-hoc manual test cases into 80+ repeatable automated checks across UI and API layers, expanding regression coverage for order processing workflows.
- Partnered with Agile development teams during sprint refinement to define testable acceptance criteria and ensure traceability of test cases back to project requirements, cutting requirements-ambiguity defects by ~30%.
- Built Power BI reports and dashboards supporting deployment readiness, application health, and operational metrics, reducing manual reporting effort.
- Investigated multi-layer defects spanning UI, services, and databases; documented and executed complex software test plans supporting functional, system, regression, and integration testing.

OneMain Financial | May 2019 – Sep 2020

QA Automation Engineer

- Built Selenium hybrid automation framework (Java, TestNG, Cucumber/BDD).
- OneMain provides consumer lending solutions. I automated and maintained frameworks covering UI, API, and
- regression testing.
- Automated API testing with Rest Assured; validated payloads and error codes.
- Automated regression and smoke suites integrated into Jenkins pipelines.

Environment: Java, Selenium WebDriver, TestNG, Rest Assured, Postman, Cucumber, Jenkins, SQL, Jira, Maven, Agile/Scrum

Alliant Credit Union | Aug 2017 – Apr 2019

Software QA Tester

- Automated smoke/regression tests with Selenium (Java, JUnit, Maven).
- Conducted API testing with Karate and Postman.
- Performed SQL database validation and backend checks.

Environment: Java, Selenium WebDriver, Karate, Postman, SQL, Jenkins, Jira, Agile/Scrum

ING Bank | Sep 2015 – Jul 2017

QA Test Analyst

- Designed and executed functional and regression test scenarios for e-invoice and registration platforms.
- Tested SOAP web services with SOAPUI and validated backend data with Oracle SQL.

Environment: SOAPUI, SQL, Jira, Agile/Scrum

ACHIEVEMENTS

- Hackathon Winner – Test Automation (EverBright, 2024): Contributed to first-place AI-assisted automation framework prototype address a gap in the release pipeline and selected by engineering and product judges.
- Hackathon Winner – Apple TV Platform Expansion (EverBright, 2024): Contributed to a first-place React Native Apple TV platform effort delivered during a single sprint, demonstrating cross-functional platform execution beyond core QA scope.
- World Record Holder – Organized a large-scale tree-planting fundraiser requiring cross-functional coordination, logistics management, and leadership at scale.

EDUCATION

High School Diploma – Suleyman Cakir High School | Turkey

CERTIFICATIONS

CompTIA Security+ – Active

Fortinet NSE 1 – Network Security Associate
